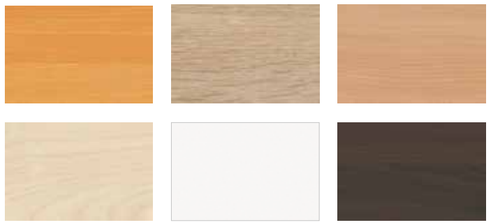
combiflex.fc

Flexible place to rest for every life situation

Comfort sitting position



Anja (44), Kassel

"With the combiflex.fc, you can easily put together your own comfortable nursing care bed even as a double bed. More flexibility is not possible"!

With the **combiflex.fc**, we have developed an innovative comfort bed that lives up to its name: Different **modules** can be **flexibly combined with each other** and enable an individual and needs-based configuration of a **single or double bed**, the advantages of which are also appreciated by people without care needs. So you can use the combiflex.fc with either a simple circumferential pannelling or with side pannelling plus high head and foot end panels.

The high-quality solid wood pannelling underlines the homely and individual character of the combiflex.fc. The combiflex.fc also has an infinitely **variable height, back and leg rest adjustment**, so that, for example, a **comfortable sitting position** can be set. If required, extras such as **lifting pole and various side rails** can be added later, so that the combiflex.fc is also suitable for care.
