

## The dino nursing care bed for young patients at REHACARE

**Verl, 14 September 2016** – Hermann Bock GmbH ([www.bock.net](http://www.bock.net)) will be setting new standards in nursing care for children and adolescents at the 2016 REHACARE nursing care trade fair (Düsseldorf, 28 September – 1 October 2016). Its new dino nursing care bed can be lowered almost to the floor, letting young patients experience independent mobility in a safe, accessible environment. To enable this, folding doors can be opened up along the entire length of the bed. With its warm wooden tones and transparent acrylic glass elements, the bed ensures accessibility and optimal safety while creating a feeling of security for children and adolescents in need of care. Thanks to a specially developed lifting mechanism that eliminates any risk of trapping or injuring occupants, the bed can be raised to an ergonomic care height of 86 cm.

“The incredible adjustability of the bed while retaining full functionality is unique. It enables the highest level of accessibility and ergonomic care,” bock’s head of sales Martin Mühlenkord emphasises. Modular padding and attachable elements provide additional safety and enable care givers to adapt the bed to meet the individual needs of young patients. The four-part lying surface can be adjusted electrically so that the dino provides the functionality of a fully-fledged adult nursing care bed. It is suited to use in paediatric rehabilitation facilities as well as in private home care.

### **dino takes new EU standard for children’s care beds into account**

Hermann Bock GmbH already took into account draft standard prEN 50637 during the development of its nursing care bed for children and adolescents. The new guideline broadens standard EN 60601-2-52 on nursing care beds to include additional safety provisions created specifically for children’s nursing care beds.
