

"For the new residence we were looking for a modern and flexible partner for nursing care beds."

Mr. López, Management of the nursing care home La Pereda

Senior residence La Pereda

LA PEREDA

Residence: La Pereda

Location: Santander/Cantabria/Spain

Goal: Human-centred care

Solution: floorline® 9.5|80, practico alu plus, livorno low

The nursing home "La Pereda" is a senior residence in an idyllic location by the sea in the area of Sardinero / Santander in Spain. A total of 184 residents are cared for in this facility in various forms of care: **in apartments as well as in short-, medium- and long-term care.**

The new rooms with their many details provide the best care conditions and have a high feel-good character. The complete range of services is rounded off by a cinema, spacious lounges, a hairdressing salon, a cafeteria, a fitness room with the latest rehabilitation technology and a newly laid out park.

Initial situation

The best possible care with a maximum feel-good factor: this is what the "La Pereda" residence stands for. For this reason, **fall prevention**, among other things, has a high priority in everyday nursing care.

In 2019, after a comprehensive renovation of the building, the nursing home was looking for a **modern and versatile manufacturer for nursing beds**. bock scored with the different bed models that offer **various nursing support and understand the nursing process** down to the smallest detail.

In particular, the floorline® 9.5|80 ultra-low bed was convincing in its support of **effective fall prophylaxis in everyday life**. At the same time, the high quality **"Made in Germany"** and the appealing appearance were very well received.

Procedure and benefits

Particularly in the search for suitable low beds, the residence relied on the **high-quality and comfortable nursing care beds from bock**. For the special area in which very active residents with advanced dementia live, the decision was made in favour of the **floorline® 9.5|80 ultra-low bed**. For the other living areas of the residence, the comfort nursing bed **practico alu plus** with the high-quality **lying surface ripolux® neo** scored points. The single rooms for autonomous residents are equipped with the **livorno low nursing bed**. Thus, all areas are equipped according to the self-imposed goal: **high-quality nursing care beds with a large height adjustment range and maximum comfort**.

Comfortable, self-determined and safe

For Mr. López, the **floorline® 9.5|80 is a safe and long-term investment**. The floorline's low height of only 9.5 cm makes it possible to **lie down without fear and protects restless sleepers from serious fall-related injuries out of the bed**. It can be lowered so low that **the resident slides out of bed safely in case of a fall**. The barrier-free low position also enables many people with limited mobility to return to bed independently. For caregivers, this means a **noticeable relief in everyday care**. Thanks to the maximum adjustable height of 80 cm, they enjoy **comfortable working conditions**.

The "La Pereda" residential complex has a total of eleven rooms with floorline® 9.5|80 ultra-low beds. The remaining 90 rooms are equipped with low beds, such as practico alu plus and livorno low with split side rails to **enable independent entry and exit and to reduce the risk of falling as much as possible**.
